

*Mental Math* These problems can be used to keep the facts alive in the memory and to develop mental math skills. Have the teacher say the problem slowly enough so that the student comprehends, and then walk him through increasingly difficult exercises. The purpose is to stretch but not discourage. You decide where that line is!

*Example*  $2 + 3 + 1 = ?$  “Two plus three plus one equals what number?”

The student thinks, “ $2 + 3 = 5$ , and  $5 + 1 = 6$ .” At first you will need to go slowly enough for him or her to verbalize the intermediate step. As skills increase, the student should be able to just give the answer.
